

Introduction

Claudio Franchi

Good afternoon to everyone and thanks for accepting our invitation.

FLC CGIL since a lot give to international and European actions a strong attention.

We are sure that a close collaboration with ETUCE and Education international, as well as close relationships with other education trade union will help and fortify our national activities.

Forecasting problems and topics, discovering different solutions, working and preparing together for big issues, as environmental sustainability or digital and artificial intelligence.

As usual we are busy, in this teacher's week, and as CGIL, tomorrow we will be in Rome for a big, very big we hope, demonstration to defend workers and citizens right to a better life.

Today, together with our friends, our colleagues, our comrades, we will put together national real problems and trade union solutions and fight.

What we want? We want quality and public education for everyone. We want higher salary and respect.

We want democracy.

It's a strange world a world where political parties, both left and right wing acts against society rights to education.

Then, Trade unions duty, today, is putting education at the center of our social and economical development.
